Relevant Details

Animal Name/Identifier squirrel

Number of animals given the product 2

Number of animals reacted 2

Species Other Rodents

Age 8

Select Unit of Measure Weeks

Weight 150

Select Unit of Measure Gram

Gender Mixed Population of Female and Male

Reproductive status Intact

Was the animal pregnant at time of event? Not Pregnant

Was the animal lactating at time of event? Not Lactating

Prior to the event, what was the animal's overall state of health? Good

Problem Details

Did the animal have any health problems and/or was taking medication prior to the event? No

Product Information

Full name of product as it appears on the package label PetAg Esbilac

Product Type Pet Food

UPC from label 0 2027999500 5

Package Type CAN

Package Size 12

Select Unit of Measure Ounce

Last date of product purchase (estimate if necessary) 03/18/2011

Number purchased on this date 1

Do you have a package/container of unopened product from this purchase? No

Do you have a package/container of
opened product from this purchase? Yes

Product Lots

Lot Number HG2790E
Expiration/use-by date 10/01/2012

Product Use Details

Describe how the product was used or
administered Used according to label. Mixed one part powder formula to two parts water, warm
and give to baby.

Date the product was first given to the
animal 03/19/2011

Date last fed the animal product from this
purchase: 03/21/2011

Were there any other foods or products
given to the animal during this time
period? No

Describe how the product was stored
before and after opening In the refrigerator

Description and Details

Date problem started 03/19/2011

Describe what happened

I received two baby squirrels from LA County animal control. The person was feeding them Esbilac. They are thin, have diarrhea and smell funny. They gave me the can of Esbilac they were using. It had been stored in the refrigerator. The color is very yellow, it's clumpy and it smells funny. Here is a photo of it compared to a good can <http://www.animaladvocates.us/images/esbilacgoodbadcolor.jpg> The rancid Esbilac is from Lot HG279OE exp 10/2012. Here is more information I've compiled on this problem. <http://www.animaladvocates.us/petagesbilac.htm> Note eWildagain's recent lab results. They showed rancid formula besides undissolved particles. I believe they are having the same problems they had in 2009. You already have a few reports on this product. I posted some of your reports in my website linked above.

Was a veterinarian consulted? No

Outcome to date Worse/Declining/Deteriorating
